

BONTERMS STANDARD SLA AND PSA — FIELD MAP (DIGEST)

Bonterms publishes neutral standard forms (NDA, Cloud Terms, Professional Services Agreement, DPA, SLA) drafted by a standing committee of 120+ lawyers, with a Cover Page of negotiated variables in front of fixed standard terms — the same “variables in front, fixed terms behind” shape as Common Paper.

Bonterms Standard SLA v1.0 — the variables a Catala module needs

COVER PAGE VARIABLE	TYPE	FEEDS
Uptime Commitment (%)	decimal	<code>ServiceCredit.commitment</code>
Service Credit table (up-time band → % of fee)	tier list	<code>ServiceCredit.credit_percentage</code>
Credit cap per month (% of monthly fee)	decimal	ceiling on <code>ServiceCredit.credit</code>
Credit request window (days after month end)	duration	eligibility gate
Support response targets by severity	duration per tier	out of scope for this demo
Measurement window (calendar month)	date range	selects the governing period

The Bonterms SLA states that Service Credits constitute liquidated damages and are not a penalty, and are the customer’s exclusive remedy for a missed uptime commitment — the same exclusive-remedy structure used in SYN-002 § A.4.3.

Why it is in this corpus

It is the license-clean stand-in for the AWS/Azure/GCP SLA prose (see `../real/cloud_sla_credit_tiers_facts.md`): the vendor tier *numbers* are facts and safe to encode, but their prose is not redistributable. Anything shown outside the company should quote Bonterms

or oneSaaS, not the vendor pages.
